What is a 120 kW rib breaker?

The 120 kW RIB breaker has two same sized bores with 5/16" set screws. The power wiring terminals for the Eaton 93PM-L 60 kW and 120 kW SIAC-B are pressure terminations. The power wiring connections for this equipment are UL and CSA rated.

What clearances are required around a battery cabinet?

The clearances required around the cabinets are to be followed from UPS ("Installation Plan" section) and battery cabinet manuals ("Installation Plan and Unpacking" section).. As a result of the connected loads high leakage current is possible. Connection to earth ground is required for safety and proper product operation.

What are the requirements for a battery room?

The upper/lower temperature deviation in any battery string in the room shall be managed within 5#176;C. Regular inspections are required to prevent hot/cold spots caused by abnormal air convection. The battery room shall install a fire suppression system (FSS) dimensioned appropriately for the space.

What size wire do I need for a UPS & battery cabinet?

All the wiring requirements including the minimum AWG size of the wires are provided in the individual manuals of UPS and battery cabinet. Conduit sizes are listed for copper wiring only and were chosen from NEC table 4, Electrical Metallic Tubing (EMT).
