Are battery energy storage systems a viable alternative for Chilean power producers?

With transmission lines at overcapacity and permitting delays slowing the development of new grid infrastructure, battery energy storage systems (BESS) have surged as a profitable alternative for Chilean power producers.

How much does a battery cost in Chile?

In fact, batteries charged at nearly \$0/MWh during the day in the sunny, northern desert regions of Chile, sell energy at night for over \$100/MWh. Although projects such as Engie's BESS Coya are already enjoying these large spreads, this capacity payment will partially de-risk Chile's dependence on volatile, but still profitable, merchant revenues.

Do Chilean co-located storage assets need an environmental impact statement?

Since Chilean co-located storage assets don't require an Environmental Impact Statement (known locally as the DIA), development times for storage assets have been cut in half compared to solar or wind assets.

Diego Pardow added that by January, Chile will have installed 2GW of BESS, which represents the target set by 2030 for the country.

Chile has emerged as a world leader in hybrid systems and standalone energy storage since implementing its Renewable Energy Storage and Electromobility Act in 2022.

Designing energy storage in a land that shakes like a maraca requires special engineering. Chilean firms have developed seismic-resistant battery enclosures that can withstand ...

Therefore, this paper proposes an optimal dispatch strategy for 5G BSs equipped with BSCs. Firstly, a joint dispatch framework is established, where the idle capacity of batteries in 5G BS ...

By the end of March 2025, the country had 954 MW of operational energy storage capacity, representing 48% of its national target of 2 GW by 2030. This progress highlights Chile's ...

This article explores how lithium-ion and flow battery technologies are reshaping Chile's power grid stability, enabling solar/wind integration, and creating new opportunities for industrial and ...

Therefore, this paper proposes an optimal dispatch strategy for 5G BSs equipped with BSCs. Firstly, a joint dispatch framework is established, where the idle capacity of ...

Energy storage is already recognized as the most appropriate solution, with a report by grid operator Coordinador Eléctrico Nacional finding that 2 GW of battery storage could ...
