This cabinet can economically house a variety of next generation electronic equipment including telco backhaul, fiber distribution, and radio equipment for wireless applications.

Photovoltaic panels convert solar energy into electrical energy, and then output -48V DC through solar power optimizer MPPT technology. The junction box gathers the electricity generated by the ...

With this solar-powered solution, telecom operators can reduce their reliance on the grid and ensure uninterrupted communication services even in remote areas. This telecom cabinet is equipped with a ...

It can provide reliable power supply in the case of a power failure completely in plant or substation. The traditional DC systems connect battery pack and run with float charging mode.

They transform solar-sourced DC into AC and store unused energy in high-performance battery packs, providing clean, renewable backup energy to mission-critical telecom equipment.

These products are widely used for indoor & outdoor power supply as backup power during travel, hiking, self-driving travel and camping. We also provide ...

These products are widely used for indoor & outdoor power supply as backup power during travel, hiking, self-driving travel and camping. We also provide OEM/ODM services.

Hybrid solar MPPT combines solar and grid or battery power to deliver stable energy for 48V outdoor base stations. You gain efficiency and stability by using this technology, which adjusts to ...
