What is a mobile water treatment system?

Mobile solutions use our Actiflo[®], Hydrotech Discfilter(TM), reverse osmosis, ion exchange and multimedia filtration technologies, delivered through trailers, containers and skid-mounted systems. Mobile water treatment systems offer a cost-effective alternative to fixed plants across many industrial environments.

Does a mobile treatment unit need a follow-up treatment?

The mobile treatment units perform primary water treatment steps. This means that the water still needs a follow-up treatment after it has left the units. The follow-up treatment is determined by the function that the water will have. When water is purified in a mobile treatment unit it does not need preliminary treatment.

What types of water treatment systems are available?

Our array of treatment solutions for well water treatment include water softener systems, iron removal filters, reverse osmosis systems, and media filtration systems. We also provide mobile water treatment systems for the following water sources; Brackish water. Tap water. River water. Rainwater. Wastewater. Back to the guide ?

Does a mobile water treatment unit need preliminary treatment?

When water is purified in a mobile treatment unit it does not need preliminary treatment. The mobile water treatment units do have the opportunity to conduct preliminary water treatment, themselves. The systems are very complete. The only things that our customer will need to add to the system are power, water connections and sewer connections.
