Can a fire department lock out a photovoltaic system?

The fire department must work with the facility personnel or residents to turn off and disconnect any equipment from its energy source before working around it. Here are the lock-out steps for a structure with a photovoltaic system and what to watch for.

How do you protect a solar system from a fire?

On the surface, the process seems simple, however, there are many steps required to ensure safety. Firefighters arrive at the scene of a fire, and then identify the solar system on the structure, shut it down, watch for hazards as they extinguish the flames, and make sure the scene is safe when they leave.

Can firefighters respond to solar energy fires?

As solar energy systems become more common, firefighters need to be equipped with the knowledge to safely respond to fires involving PV-equipped structures. SETO awardee, IREC, developed free, self-paced, interactive online training and live workshops designed specifically for firefighters.

What should a firefighter do if a solar panel fires?

They also need to recognize that a large volume of fire in or around the solar panels could mean the roof is burning as well as the panels that may lead the IC to call for a defensive operation. Firefighters can safely extinguish the fire by applying a straight stream from a minimum of 20 feet away or use a fog pattern from 5 feet away.

While Stateline Solar specializes in ensuring those who want solar have access to it and ensure education for all, the local solar company also ensures that first responders are equipped to ...
