My question, are those two that show no current simply so dead that they can't take a charge, or is there some kind of magic you have to work to tell the battery you're about to charge it?

This charger fully charged my 460Ah Epoch LiFePO4 battery correctly exactly one time. Now, it isn't charging. In the VictronConnect app, it shows proper voltage but zero current.

How Should One Repair a Lithium Battery That Has Voltage But No Current? A lithium battery showing voltage but no current is a frustrating puzzle. You know it's not completely dead, but why isn't it ...

The battery capacity does not directly determine the maximum current of a battery. It only determines how long the battery can supply a current ...

I had a new battery installed in November (from Halfords) and decided to bring to Halfords garage and they confirm the battery and alternator were OK. When Volvo re-opened, I ...

Battery Mystery Solved: Voltage Present but No Amps - What's Happening? The answer is yes, it is possible for a car battery to have voltage but no amps, indicating a lack of current flow. ...

With the faucet off you have pressure but no flow. That's like voltage with no current. Voltage is the measure of potential, or how many electrons are available to move. Current measures ...

Battery is easy to do yourself if you're at all handy around a screw driver and a spanner, just remember to reset the battery management system before you start using the car or it'll kill the ...
