Terrament is a New York based clean-tech startup building a patented long-duration energy storage solution that reimagines gravity storage. Our technology maximizes height and weight to achieve 20x ...

Terrament is a New York based clean-tech startup building a patented long-duration energy storage solution that reimagines gravity storage. Our technology ...

As cities continue to grow and the demand for clean energy rises, ...

Known as the Earth Battery, the approach uses multiple fluids to store energy as pressure and heat underground. The system includes features of compressed-air energy storage (CAES) in that ...

Today, electric vehicles are challenging that model. As EV adoption grows, a parallel infrastructure for electrical energy delivery is emerging. A key development within this new ...

Modern underground energy storage systems utilize modular lithium-iron-phosphate (LFP) batteries in shock-resistant casings. These waterproof units integrate with smart grid software, ...

we've all circled a dimly lit parking garage while our phones die and EVs hunt for chargers. But what if these concrete giants could morph into 24/7 power plants?

Since battery storage plants require no deliveries of fuel, are compact compared to generating stations and have no chimneys or large cooling systems, they can be rapidly installed and placed if ...
