Canada's Clean Electricity Regulations (Canada, 2024a) require all provinces to fully "decarbonize" their electricity generation as part of the federal government's broader "Net ...

In this study, we examine the complete decarbonization of Canada's entire energy sector, including energy exports, using solar PV plants installed on marginal land and ...

Wind and solar photovoltaic energy are the fastest growing sources of electricity in Canada, while biofuels and electric vehicles also play an important role in reducing the climate impact of ...

Canada has only begun to scratch the surface of its vast and untapped wind and solar energy resources. At the end of 2024, we had 24 GW of wind energy, solar energy and energy storage installed ...

Over the last decade, wind and solar power generation in Canada saw considerable growth. Wind energy increased fourfold to 36 TWh, representing 5.6% of 2020's total electricity generation. Solar ...

In this study, we examine the complete decarbonization of Canada's entire energy sector, including energy exports, using solar PV plants installed on marginal land and previously disturbed ...

A research team at the University of Alberta has updated a database of renewable energy projects in Canada created by Patel and Dowdell in 2019 (click here to ...

This brief explains how a shift to clean power generation can offer affordable, reliable electricity, benefiting households and businesses alike.
