How much does it cost to power a data center?

With this information, the calculator can determine that your power density is 12.6 kW per rack and that it costs \$13,245 annually to power each rack at 100% usage. In your data center of 500 racks, that amounts to over \$6.6 million in total annual data center energy consumption costs. This information alone is useful.

How much energy does a data center use?

The digital age is driven by data centers, yet their escalating energy demands pose a significant challenge. Currently consuming approximately 1% of global electricity, this figure is projected to rise dramatically, with U.S. data centers potentially using up to 9% of the nation's power by 2030.

How much does a data center rack cost?

Illustrative Annual Cost to Power One Data Center Rack (by Density, PUE, & Electricity Rate) This table shows how rack density, PUE, and location dramatically impact annual costs. An AI-capable 60 kW rack in a high-cost state could exceed \$200,000 annually, underscoring the financial implications of high-density infrastructure.
