Will Djibouti be the first country to produce 100% green energy?

In its bid to become the first country on the continent to produce 100% green energy by 2035, Djibouti can also draw on other ambitious projects. These include the solar power project in the Grand Bara desert, for which work began in 2020.

Will Djibouti be self-sufficient in energy production in 2035?

In December 2023, the Republic of Djibouti signed up to the African Green Hydrogen Alliance. The country's formidable prospects in terms of renewable energy means that Slim Feriani can look to the future with confidence. "The objective for 2035 is to be self-sufficient in energy production," he says. "We should get there before then.

Why did Djibouti open up electricity production to independent operators?

For the government, the aim was to open up electricity production to independent operators so as to achieve energy independence as soon as possible. It should be noted that the state-owned company *Electricité de Djibouti* retains a monopoly on the transmission and distribution of electricity. The project was developed by Red Sea Power (RSP).

Can Djibouti reduce the cost of electricity?

Lowering the cost of electricity is a major challenge for Djibouti, but the benefits would be substantial. According to the World Bank, reducing the cost of electricity and telecommunications could increase real GDP by 39.1% by 2030, generate 23,000 jobs and considerably boost household incomes, while reducing poverty.

The Djibouti Photovoltaic Energy Storage Power Station exemplifies how strategic renewable investments can transform energy economics while addressing climate imperatives.
