BRUSSELS, Belgium (28 January 2026): The EU installed 27.1 GWh of new battery storage capacity in 2025, a new record year powered by strong utility scale deployment, according to ...

Boosting the industrial base for battery production is therefore a key task for the EU. While the EU battery sector enjoys strong support for its research and development activities, it also faces ...

Battery energy storage in Europe is key to renewable integration and grid stability, requiring tailored risk management and insurance strategies for growth.

Redox-flow batteries - many chemistries possible, most developed one based on vanadium, but versions working on cheap, non-toxic and non-critical materials available, flexible in power and ...

With the current import tariff to buy batteries into Europe at only 1.3% and most of the supply chain already developed in non-EU countries, the ...

Executive summary Batteries are an essential part of the global energy system today and the fastest growing energy technology on the market Battery storage in the power sector was the fastest ...

The decarbonisation of the energy mix and reductions in overall CO2 emissions are other clear, positive outcomes of an increased use of Battery Energy Storage in Europe.

Executive summary Batteries are an essential part of the global energy system today and the fastest growing energy technology on the market Battery storage ...
