Learn effective strategies to safeguard battery energy storage systems against fire risks, ensuring safety and reliability in energy storage.

Orbis solution for BESS (Battery Energy Storage Systems) Orbis systems deliver automatic, enclosure-level fire control using inert gas suppression designed to operate safely in energized BESS ...

This article explores nine groundbreaking battery technologies that are transforming energy storage safety, examining their distinct advantages and the challenges they encounter in a ...

Thermal runaway releases highly flammable gases and oxygen, which can accumulate and cause intense fires or powerful explosions within confined battery enclosures. The dense packing of cells ...

Lithium-ion batteries emit extremely toxic chemicals when burned, poisoning the air. Even worse, these gases are extremely flammable ...

Our fire suppression technology is specifically designed to be suitable for Li-ion battery fires. Our technology is free from piping or nozzles, making it ...

Gas and aerosol-based fire suppression methods are widely used in enclosed battery storage systems, where eliminating oxygen or chemically neutralizing flames is a viable strategy.

The scope of this document covers the fire safety aspects of lithium-ion (Li-ion) batteries and Energy Storage Systems (ESS) in industrial and commercial applications with the primary focus on active fire ...
