Will a CTEs be built in Helsinki?

A CTES is planned to be constructed in Kruunuvuorenranta in Helsinki out of two caverns that were previously used to store diesel oil and oil products. The cavern storage would be a seasonal storage, operating with a rather different range and principle from the currently installed CTES in Finland.

Can energy storage projects help balance the energy system?

Thus, although these projects would store energy in the form of hydrogen and its derivatives and could help balance the energy system by absorbing excess energy from VRES and providing DR services, they cannot be considered as energy storage projects as the end use of the products is not in the energy sector.

How does Vres affect Finnish electricity supply?

The decrease in dispatchable power generation from thermal power plants using stored fuels and the increase in the amount of electricity generated by VRES leads to a decline in the flexibility of the Finnish electricity supply. As a result, it becomes more challenging to ensure that supply and demand always match.

There has especially been growth in utility-scale battery energy storage systems, with about 0.2 GWh currently in operation and a further 0.4 GWh planned. A similar growth in thermal ...

Finland's energy storage sector - particularly energy storage tanks - has become the unsung hero of their carbon-neutrality ambitions. But let's cut to the chase: if you're here, you ...
