The get/set pattern provides a structure that allows logic to be added during the setting ("set") or retrieval ("get") of a property instance of an instantiated class, which can be useful when some instantiation ...

11 request.GET is the dictionary of the GET variables in the http request made to your server for example:

The "get" lets you treat a class method, as if it were a simple property in an object. If you leave off the "get", you can still access the value by calling .area () instead of just .area

Is it possible to pass parameters with an HTTP get request? If so, how should I then do it? I have found an HTTP post requst (link). In that example the string postData is sent to a ...

Ultimately it probably doesn"t have a safe .get method because a dict is an associative collection (values are associated with names) where it is inefficient to check if a key is present (and return its value) ...

The get/set pattern provides a structure that allows logic to be added during the setting ("set") or retrieval ("get") of a property instance of an instantiated class, which can be useful when some ...

From what I can gather, there are three categories: Never use GET and use POST Never use POST and use GET It doesn"t matter which one you use. Am I correct in assuming ...
