What are telecommunications enclosures?

Telecommunications enclosures are protective cabinets or racks designed to house communication equipment such as fiber optics, switches, and power systems. Their primary purpose is to shield these components from external threats, including environmental conditions, physical damage, and unauthorized access.

How do I choose a telecommunications enclosure?

Proper installation of telecommunications enclosures is essential to their performance and longevity. Select an appropriate site that meets environmental and logistical needs, whether indoors or outdoors.

What materials are used in telecommunications enclosures?

The materials used in telecommunications enclosures directly influence their durability and performance. Steel and aluminum are popular choices for custom sheet metal enclosures due to their strength and resistance to corrosion. However, plastics offer a lightweight, cost-effective alternative for less demanding environments.

Who makes a telecom enclosure?
