How can Danfoss help your data center?

From power supply to rack and back: Danfoss' power distribution units can handle all demands regarding your data center's electrical power system. We can help you design and install power distribution systems and connect new technology that spends less energy while ensuring reliability and uptime. Most data centers today run on AC distribution.

What is data center power distribution?

Data center power distribution is not just about finding the right power distribution units. With Danfoss' advanced data center equipment, you can do much more than provide power to your racks: Our DC Grid solutions help overcome the intermittent nature of renewable energy sources, supporting energy-neutral operations.

How is the data center industry evolving?

Storage Industry Insights Report Executive Summary The data center industry is evolving rapidly with unprecedented speed and innovation, wit

When a 2022 cold snap froze wind turbines, the city's thermal storage facilities saved the day by releasing heat from summer-stored excess energy. Talk about a seasonal ...

We can design and manufacture solutions tailored to your data center based on your input/output voltage, types and quantities of interfaces, and other requirements.

In a modular UPS, capacity can be easily scaled up or down to match power demand changes. This makes things simple for operations personnel and equipment maintenance.
