What size is a server rack & data cabinet?

All of our server racks & data cabinets have a 19" width, which is standard in the industry. This means that you can use our equipment with other standard OEM manufacturers' networking equipment. We carry racks at 600mm, 800mm, 900mm and 1000mm depth. We also have racks with several heights to fit your server requirements.

What type of enclosure do I need for a server rack?

Industrial applications for server racks often need a robust enclosure to protect from dust and often water. For this type of rack we would recommend our iLINQ range. These are IP55, multiple application, stand-alone enclosures in single or double door configurations.

How are the racks secured?

All racks are secured in our facility with air chilling. We welcome your own PDU or custom requests. We peer with 3 exchanges in Auckland, New Zealand and our facilities are perfect for your next POP. Please contact us with your requirements. We hold over 500 servers and 1000s of server parts in our warehouse adjacent to the Data Center.

Why is a server rack needed?

A server rack is necessary to store server equipment safely while minimizing floor or shelf space. Along with server racks, we offer a range of rack mounting hardware, rack panels, rack rails, server rack shelves, and server rack accessories to facilitate server installation.
