Explore how solar energy is driving the future of transportation with electric buses, trains, and cleaner mobility solutions.

It has been demonstrated that the proposed integration allows the subway system to still function without any hindrance to rail operation. The system is able to provide charging power for three to six electric ...

Battery-electric trains now recharge in minutes at stations via containerized "power banks" (opportunity charging) or juice up overnight at depots - slashing infrastructure costs by 30% (McKinsey, 2024).

Plans are underway to harness solar energy across various stations and tracks, contributing to the national goal of increasing the use of renewables in public transport systems.

This article explores the rise of solar-powered rail stations, other renewable energy initiatives, and how they're transforming rail infrastructure to meet the demands of a greener future.

Our portfolio includes charging stations at terminal, depot or at selected passenger stops, giving even a range of several km on a single flash-charge. Hitachi Energy has developed an optimisation tool for ...
