Most grid-tied systems automatically shut down unless paired with a battery backup. This article explains why, explores your backup ...

During a power outage, grid-tied solar systems automatically shut down. This is a safety measure to prevent your solar energy from flowing ...

During a power outage, off-grid solar power systems continue to generate electricity. Since these systems are not connected to the grid, they can ...

Learn why most solar systems shut off in blackouts, how battery-backed systems let you keep power, and tips to survive an outage.

Most grid-tied systems automatically shut down unless paired with a battery backup. This article explains why, explores your backup options--including Enphase Ensemble--and shows how ...

During a power outage, off-grid solar power systems continue to generate electricity. Since these systems are not connected to the grid, they can operate independently and provide ...

In a blackout situation, the power from your solar panels goes nowhere - unless you have some way of storing the electricity (with a battery) or otherwise cutting your system off from the grid. In this video ...

Do solar panels work during a power outage? Learn how solar systems behave, why grid-tied systems shut down, and how portable power stations help.
