How do I calculate kW for a data center?

Use this calculator to see what it really takes to build out a Tier 1, Tier 2, Tier 3 or Tier 4 data center. Kw can be calculated by either adding up the name plate power supply capacities of your hardware and dividing by 1,000, or by taking the amps X the volts of your power circuits powering your equipment and dividing by 1,000.

Is building a data center more expensive than colocation?

Actual data center costs can vary greatly from this model; the primary value of this tool is to evaluate how each cost input affects the lifetime cost differences between the two approaches. After 10 years, building is 12.7% less expensive than colocation with a break-even at < 6 years. Blog: Cloud vs. Colocation - Which is Best for Your Business?

What is included in a colocation data center?

Mesh walls, demarcation rack with patch panels, locking door, ladder rack and fiber raceway up to first cabinet position or up to 10 feet. Security accessories include dedicated cameras, biometric hand scanners and more. Built-to-order mesh cabinets and colocation data center cages with space assigned based on power allocations.

What is a wall mounted data cabinet?

Wall mounted cabinets are ideal for data center zones that require dedicated wall mount data cabinets to separate high-performance equipment from general-purpose gear. Integrated cable management channels keep fiber and copper runs organized, lowering the risk of accidental disconnection.

The attached data center cost calculator covers capital and operating expenses over a nine-year window for a traditional data center building, not containerized options.

As you adjust the number of cabinets and the total available KW, this graphic will display the watts per square foot capacity of your data center and show how your design compares to industry ...
