What are the benchmarks for PV & energy storage systems?

The benchmarks are bottom-up cost estimates of all major inputs to typical PV and energy storage system configurations and installation practices. Bottom-up costs are based on national averages and do not necessarily represent typical costs in all local markets.

How much does a residential PV system cost?

Figure 9. Q1 2022 U.S. benchmark: 7.9-kWdc residential PV system cost (2021 USD/Wdc) This section describes our commercial PV model's structure and parameters in intrinsic units (Section 6.1) as well as its output (Section 6.2).

Do residential customers finance PV systems?

For instance, many residential customers finance their PV systems, but the benchmarks exclude financing costs, which can represent around 20% of reported market prices. For further research on the complexity of PV markets and reported market prices, see Gillingham et al. (2016) and Barbose et al. (2021a).

How are benchmark PV operations & maintenance costs estimated?

Benchmark PV operations and maintenance (O&M) costs are estimated using a model (Walker et al. 2020) that provides a line-item cost estimate of measures that correspond to the PV O&M services described in Best Practices for Operation and Maintenance of Photovoltaic and Energy Storage Systems, 3rd Edition (NREL et al. 2018).
