Global energy storage additions are on track to set another record in 2025 with the two largest markets - China and US - overcoming adverse policy ...

In this blog, we'll cover what is driving the unprecedented growth of the energy storage sector, address challenges the industry needs to navigate, ...

By the end of December 2025, China's cumulative installed capacity of new energy storage technologies including lithium-ion reached 144.7GW, representing an 85% year-on-year rise.

In 2023 alone, global battery storage additions reached 42 GW--more than double the previous year's installations. Looking ahead, experts predict 80 GW of new additions in 2025, ...

Explore how energy storage growth is driving demand for battery materials, copper, aluminium, and vanadium in the clean energy transition.

In this blog, we'll cover what is driving the unprecedented growth of the energy storage sector, address challenges the industry needs to navigate, and show how energy storage unlocks ...

As a result of a comprehensive analysis, this report identifies gaps and proposes strategies to address them. Researchers, industry experts, and policymakers will benefit from the findings of ...

Cost breakthroughs in lithium-iron-phosphate batteries, long-duration storage mandates in China, and the U.S. Inflation Reduction Act's standalone storage investment tax credit are driving ...
