-----

Rain or snow can damage a generator, cause short circuits, or enable corrosion in the long-term. If you need to run it during a storm, protect it using a specially designed cover or enclosure.

It's important to know that portable generators emit carbon monoxide (CO), a poisonous, deadly gas. Use these tips to avoid CO exposure. Stay Up to Date!

Use weatherproof covers for outlets and connections, and never operate the generator in standing water or during heavy rain without proper ...

Follow essential generator safety protocols to protect equipment and personnel during operation and maintenance.

Make sure to start/stop the generator when no electrical loads are connected. Make sure the generator has 3-4 feet of clear space above and on all sides. Make sure all connections are ...

Do you have questions about using a home generator when disaster strikes? The American Red Cross provides tips for safe generator use during a disaster.

Always keep generators at least 20 feet away from your home. Never operate a generator in an enclosed space.

Use weatherproof covers for outlets and connections, and never operate the generator in standing water or during heavy rain without proper protection. By adhering to these measures, you ...
