Evolution of yearly photovoltaic electrical energy production (orange dots) and installed photovoltaic power (black dots) since the first grid-connected PV power plant in 2011 in Argentina

Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power.

With its solar energy capacity growing significantly, Argentina is cementing its position as a leader in Latin American solar power. This ...

The province is moving forward with a new transmission line that will add 180 MW of transport capacity, opening space for additional solar PV developments. At the same time, it ...

Plug-in solar has remained in the shadows because of a lack of safety standards and often costly requirements imposed by utilities, but that's changing.

Solar energy is radiation from the Sun that is capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy incident on Earth is ...

People have used the sun's rays (solar radiation) for thousands of years for warmth and to dry meat, fruit, and grains. Over time, people developed technologies to collect solar energy for heat and to ...

With its solar energy capacity growing significantly, Argentina is cementing its position as a leader in Latin American solar power. This impressive expansion is driven by a combination of ...
