How big is our solar system? It's incredibly hard to grasp the size of the Milky Way - so let's use a football pitch as a guide! Our solar system is huge. So huge in fact that it might be pretty difficult to ...

The extent of the Solar System is defined by the solar wind -- particles driven by the Sun's magnetic field -- and gravitational influence. The heliopause is the boundary created when solar wind particles ...

In addition to a powerful gravitational field, the Sun possesses a very strong magnetic field, which carves out a volume of space called the heliosphere, within which lie all the planets and...

How big is our solar system? It's incredibly hard to grasp the size of the Milky Way - so let's use a football pitch as a guide! Our solar system is huge. So huge in ...

The solar system comprises the Sun, all the objects gravitationally bound to it, and the heliosphere, an enormous magnetic bubble enclosing most of the known solar system, including the solar wind and ...

In another effort to bring these vast distances down to Earth, we've shrunk the solar system down to the size of a football field. On this scale, the Sun - by far the largest thing in our solar system - is only a ...

Use these resources to learn about the work of National Geographic Explorers including Munazza Alam, Cynthia Chiang and Sophie Dia Pegrum, and to teach ...

The Solar System, located in the Milky Way Galaxy, is our celestial neighborhood. Our Solar System consists of 8 planets, several dwarf planets, dozens of moons, and millions of ...
