Why is Bess important for Malta?

The introduction of BESS is crucial for Malta as it allows for the storage of surplus energy generated by photovoltaic panels during low demand periods. This stored energy can then be utilized during peak demand times, thereby stabilizing the electrical grid.

How does the Bess project affect PV generation in Malta?

The BESS project is also intended to mitigate weather-related challenges posed by renewable energy sources, which are reliant on climatic conditions and can therefore lead to significant dips in generation during moments of sudden cloud coverage severely affecting the PV generation in Malta.

How will Bess contribute to enabling Malta to achieve EU decarbonisation commitments?

BESS shall contribute towards enabling Malta to achieve its EU decarbonisation commitments, as it counters the intermittency characterising Variable Renewable Energy Sources (VRES) such as solar PV and stabilises the grid among the potential provision of other services.

Why do we need a Bess system?

BESS play a crucial role in addressing this need by storing excess energy generated during periods of low demand and releasing it during peak demand periods. This capability not only enhances the efficiency of energy use but also contributes to the stability and reliability of the power grid.

InterConnect Malta has launched tenders for two large-scale Battery Energy Storage Systems, aiming to enhance renewable energy integration and ...

InterConnect Malta has launched tenders for two large-scale Battery Energy Storage Systems, aiming to enhance renewable energy integration and stabilize Malta's energy supply.

Interconnect Malta had launched the procurement process for the design and construction of two utility-scale Battery Energy Storage Systems (BESS).

Interconnect Malta had launched the procurement process for the design and construction of two utility-scale Battery Energy Storage Systems ...

The contractor shall also design and installation of water reservoir for the deluge system (and flooding, if applicable) and fire service vehicle supply, a water management system and a reservoir to prevent ...
